

A new solution for stadium and arena steps is now available from SPS Technology with the introduction of Speed Stairs. This exciting offering in SPS Technology's range of terrace products provides the opportunity to save money and substantial program time through the rapid installation of these new light-weight stairs which are sound deadened for a solid feel.

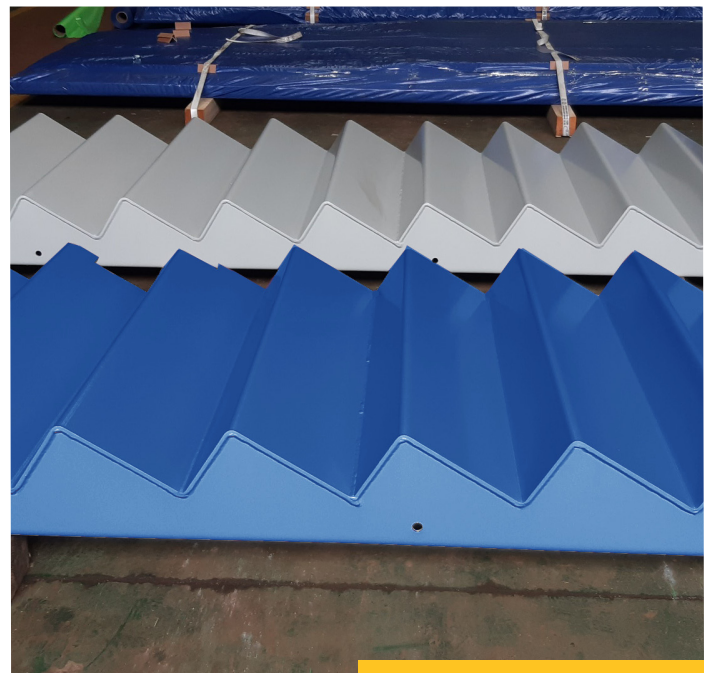

Speed Stairs at a glance:

- Prefabricated modular stairs
- Supplied in any color with nosings and anti-slip coatings factory applied
- Easy to clean
- Reduced risk of damage during installation compared to concrete
- Easy to re-coat and repair minor damage
- Safety enhanced as no cracking or spalling occurs
- Solid feel and sound deadened

Rapid installation

Smaller, lighter equipment is used for the installation of Speed Stairs. The steel Speed Stairs simply bolt into place with fixing holes pre-drilled. Once in place, handrails to finish off the staircase, can be installed in a fraction of the time taken with concrete stairs.

Manufactured off-site, these light-weight steel stairs are fabricated to your project's specifications. They arrive on-site finished; painted, with non-slip coatings and nosings applied. Fitting holes along with holes for handrail attachment have been pre-drilled with the precision that factory fabrication affords. Reduced stair weight results in less site transport as many flights can be stacked on one truck and only light plant is required for unloading and installation.
